

SokaSoko — PLAYER Subscription Test Script (Internal)

Version 1.0 · Internal QA use — includes admin path and backend enforcement

What you're testing

The new PLAYER Subscription screen and its backend enforcement. Player sees current tier, usage snapshot, upgrade CTAs, plan picker, and a payment sheet that captures a manual transaction reference. Paid tiers land as PENDING and require admin activation. This document also covers the admin activation path and the backend enforcement points.

Prerequisites

- Android device on the latest internal-testing build.
- A test PLAYER account.
- An admin account for the activation cases (case 16).
- Access to Render logs and the admin panel.

Environment

- Backend: <https://sokasoko.onrender.com> (verify `/v1/subscriptions/catalog` returns 200).
- Mobile: sokasoko-mobile main branch commit b2351f2 or later.
- Backend commit: 48aa2ba or later on main.

Test cases

1. Menu access — PLAYER only

- Log in as a PLAYER, open Profile, tap the ■ menu.

Expected: 'Uandikishaji' entry appears at the top of the menu with a `workspace_premium` icon. Confirm it does NOT appear for non-PLAYER accounts (log in as e.g. COACH and re-check).

2. Fresh account — Standard default

- Open Uandikishaji on a PLAYER with no prior subscription record.

Expected: GET `/v1/subscriptions/me` returns `tier=STANDARD`, `subscription=null`. The Current-tier card shows Standard bullets only (no negatives). The Usage card is hidden entirely because Standard has no metered features enabled.

3. Current-tier card content

- On Standard: verify the ✓ list.
- Switch to Gold and re-check.

Expected: Standard: Wasifu, Chat, Ripoti (1/mo), Tathmini (1/mo, no share). Gold: adds AI (100/mo), Maombi ya kutathminiwa (2/mo), Changamoto, and evaluation reports become visible. Platinum: everything marked 'bila kikomo' where applicable.

4. Usage bars gated by tier

- On Standard: confirm no AI or eval-requests rows exist.
- On Gold: confirm all four rows appear.

Expected: Bars only render for features with a non-zero cap. Standard hides AI + evaluationRequests. Gold/Platinum show all four. Bars show used/cap or used/∞ for unlimited.

5. Compare screen — text fit & tap-through

- Tap 'Linganisha vifurushi vyote'.
- Rotate device and re-check on landscape.

Expected: Matrix table opens. Column headers auto-scale (FittedBox). No values wrap to 2 lines. Tapping a column header OR the 'Chagua' pill under it closes the compare screen and opens the plan picker for that tier.

6. Plan picker prices

- Trigger the plan picker for Gold, then for Platinum.

Expected: Gold: MONTHLY=5,000 / QUARTERLY=10,000 / BIENNIAL=20,000. Platinum: 10,000 / 25,000 / 40,000. Verify against /v1/subscriptions/catalog response.

7. Payment sheet UX

- Pick a plan; verify payment sheet fields.

Expected: Sheet contains: title, amount in large TSh, 4 method chips (default MPESA), instructions box that changes per method, reference text field, Ghairi / Wasilisha buttons. Keyboard push should not overflow the sheet (viewInsets padding).

8. Reference validation

- Try Wasilisha with empty reference on MPESA/SELCOM/AZAMPAY.
- Try Wasilisha with empty reference on MANUAL.

Expected: MPESA/SELCOM/AZAMPAY: local snackbar 'Tafadhali weka reference ya malipo'; no network call. MANUAL: submits with empty transactionId.

9. Submit — creates PENDING subscription

- Submit with reference TESTREF001, method MPESA, Gold Monthly.
- Check Render logs for POST /v1/subscriptions.
- Check MongoDB (or admin panel) for the created record.

Expected: HTTP 201. New Subscription doc: user=, userType=PLAYER, tier=GOLD, plan=MONTHLY, status=PENDING, paymentMethod=MPESA, transactionId=TESTREF001, amount=5000. Client sees success snackbar; effective tier remains STANDARD until admin activation.

10. Downgrade to Standard

- From Gold/Platinum, tap 'Rudi Standard (bure)'.

Expected: POST /v1/subscriptions with tier=STANDARD creates and auto-activates. Effective tier flips to STANDARD immediately. Any previously active Gold/Platinum record stays in DB with status ACTIVE — this is a known simplification, admin should CANCEL the old record manually if it exists.

11. Overflow / typography audit

- Check narrow devices (e.g. Pixel 4a) for tier badge row, compare table headers, price cells.

Expected: Tier badge row uses Wrap. Compare header uses FittedBox(scaleDown). Row labels have maxLines:1 + ellipsis. No visible clipping.

12. Ismaili AI enforcement

- Standard: send any question via Ismaili bubble.
- Gold: send 101 questions in one month (or seed the counter).
- Platinum: send 31 questions in one hour.

Expected: Standard: 429 with reason=TIER_DISALLOWED. Gold: 429 with reason=MONTHLY_CAP after 100. Platinum: 429 with reason=HOURLY_FAIR_USE after 30/hr; DAILY_FAIR_USE after 300/day.

13. Scout reports — list gating

- As a Standard PLAYER with existing scout reports, GET /v1/scout-reports.
- Confirm response shape.

Expected: Each report is returned with locked=true, lockReason='TIER_HIDES_CONTENT'. Body fields are stripped. Response includes tier and capThisMonth top-level.

14. Scout reports — create cap

- As a scout, POST /v1/scout-reports for a Standard PLAYER twice in one month.

Expected: First: 201. Second: 429 with reason=MONTHLY_CAP, cap=1. Gold PLAYER: allows up to 10. Platinum: no limit.

15. Match request-scout — player cap

- As a Standard PLAYER, POST /v1/matches/:id/request-scout.
- As a Gold PLAYER, do it 3 times.

Expected: Standard: 429 with reason=TIER_DISALLOWED. Gold: 3rd request 429 with reason=MONTHLY_CAP, cap=2. Platinum: unlimited.

16. Admin activation path

- Log in as admin.
- Find the PENDING subscription from case 9 (GET /v1/subscriptions?status=PENDING).
- Verify payment by cross-checking the reference against M-Pesa statement.
- POST /v1/subscriptions/:id/activate with adminUserId in body.
- Refresh the player's Uandikishaji screen.

Expected: Subscription status flips to ACTIVE with startDate=now, endDate=now+1mo, gracePeriodEndsAt=endDate+5d. Player's effective tier becomes GOLD. Usage card appears with all metered bars visible.

17. Grace + expire sweep (long-running)

- Manually POST /v1/subscriptions/lapse-sweep after setting endDate to the past.

Expected: ACTIVE→GRACE if endDate <= now. GRACE→EXPIRED if gracePeriodEndsAt <= now. Bell notifications ('Subscription renewal reminder' / 'Subscription expired') created for each transition in the past hour.

18. Profile avatar full-screen viewer

- Double-tap profile avatar.

Expected: Opens fullscreen with Hero animation. InteractiveViewer allows 1x-4x pinch zoom. Tap anywhere or × top-right dismisses. No regression to the normal profile tap-to-crop flow (single-tap still opens the crop sheet if that was already wired).

How to report a bug

Field	Example
Test case #	9 — Submit paid subscription
Device / OS	Pixel 6a · Android 14
App version	1.0.1+14
Backend commit	48aa2ba
Account (type + number)	PLAYER · TFH-P-A000006

Endpoint (if backend)	POST /v1/subscriptions
Expected	201 + PENDING record
Actual	500 CastError('me' is not ObjectId)
Screenshot / repro	attached
Render log excerpt	attached

Known limitations (not bugs)

- Placeholder phone numbers in `_paymentInstructions()` must be swapped for real merchant numbers before external testers use this.
- Paid subscriptions remain PENDING until admin activation; no gateway callback path exists yet.
- Only PLAYER has `FEATURE_CAPS` defined. Non-PLAYER types hit the legacy Ismaili blanket limiter as a safety net until their catalogs are locked.
- Challenges enforcement is a stub — no `/v1/challenges` module exists yet.
- Downgrade to Standard does not cancel any existing paid Subscription rows; admin must manually CANCEL if needed.
- Play Store Data Safety currently declares no IAP; must be updated before shipping a build with real payments.
