

SokaSoko — VENDOR Subscription Test Script (Internal)

Version 1.0 · Internal QA

What you're testing

VENDOR subscription — four paid tiers with the ad-space differentiator. Standard is paid from day 1 (like CLUB). 30-day auto-Gold trial applies. Enterprise pricing is negotiated per account and comes through as a contact-us request. Home-feed post cap enforcement is wired via the shared metered middleware; AI cap via SubscriptionUsage. Other tier caps (product listings, promo slots, flash sales, broadcast, SokaSoko slot) are defined on FEATURE_CAPS but their consuming endpoints are deferred.

Prerequisites

- Backend commit 41e8045 or later on main.
- Multiple VENDOR test accounts: one <30 days (trial), one >30 days no sub, one Standard active, one Gold, one Platinum.
- Admin access to activate PENDING subs (including Enterprise contact requests).
- Render logs + MongoDB for backend verification.

Environment

- Backend: <https://sokasoko.onrender.com> — 41e8045+.
- Mobile: sokasoko-mobile f209ba1+.
- Constants: VENDOR_TRIAL_DAYS=30. Enterprise pricing = null across plans (contact-us).
- METERED_POST_TYPES now includes VENDOR.

Test cases

1. Catalog shape

- GET /v1/subscriptions/catalog and inspect prices.VENDOR + features.VENDOR.

Expected: Standard 30k/75k/150k. Gold 100k/250k/500k. Platinum 300k/750k/1,500k. Enterprise: all null. Feature caps present for Standard/Gold/Platinum/Enterprise with productListings, promoSlotsPerMonth, homeFeedPostsPerMonth, flashSalesPerMonth, adInHomeFeed, featuredInVendorDirectory, canBroadcastToAll, sokasokoAccountSlot, reachScope, analyticsLevel.

2. Onboarding trial

- GET /v1/subscriptions/me?userId=&userType;=VENDOR.

Expected: vendorStatus.tier='GOLD', trialActive=true, trialEndsAt=. Effective tier = GOLD via getEffectiveTier trial branch.

3. Post-trial without subscription

- Same GET on VENDOR >30 days old, no active Subscription.

Expected: vendorStatus.tier='STANDARD', trialActive=false. But no ACTIVE Subscription row → caller has minimal effective access.

4. Server-forced tier accepts client tier for VENDOR

- POST /v1/subscriptions with userType=VENDOR and tier=STANDARD/GOLD/PLATINUM.
- Tier=ENTERPRISE.
- Tier='FAKE'.

Expected: Real tiers: 201 with amount from PRICES.VENDOR...TZS. Enterprise: 201 with amount=0 (contact-us marker). Bad tier: 400 invalid tier.

5. Home-feed post cap

- Standard VENDOR POST /v1/medias 6 times in one month.
- Gold VENDOR POST 26 times.
- Platinum POST 76 times.

Expected: Standard 6th: 429 with cap=5. Gold 26th: 429 with cap=25. Platinum 76th: 429 with cap=75. Enterprise: no cap. Non-METERED_POST_TYPES creators unaffected.

6. AI cap per tier

- Consume AI Ismaili as each tier.

Expected: Standard capped at 30/mo, Gold 100/mo, Platinum 300/mo, Enterprise unlimited with fair-use 30/hr + 300/day. Enforcement via SubscriptionUsage.consume('ai').

7. Enterprise contact-us flow

- As a VENDOR, tap the Enterprise card in the mobile screen (or POST /v1/subscriptions directly with tier=ENTERPRISE).

Expected: PENDING Subscription created with amount=0, tier=ENTERPRISE, notes='Vendor Enterprise contact request'. Admin sees it in the subscriptions list. Once admin sets amount + activates, subscription flips to ACTIVE and vendorStatus.tier=ENTERPRISE.

8. Mobile — tier card content

- Log in as each tier VENDOR and open Uandikishaji.

Expected: Standard: ad in home feed BULLET absent. Gold: 'Matangazo kwenye home feed (Mkoa)'. Platinum: '(Kitaifa)' + Featured directory + SokaSoko slot Kipaumbele + Advanced analytics. Enterprise: adds 'Kutuma ujumbe kwa akaunti zote', SokaSoko slot Uhakika, Advanced+export.

9. Reach scope translation on mobile

- View tier bullets on mobile.

Expected: LOCAL → 'Kata / Wilaya', REGIONAL → 'Mkoa', NATIONAL → 'Kitaifa'. sokasokoAccountSlot: PRIORITY → 'Kipaumbele', GUARANTEED → 'Uhakika', NONE → hidden.

10. Usage bars on mobile

- Log in as Gold VENDOR that has posted a few home-feed items and used AI.

Expected: 'Matumizi ya mwezi huu' card shows AI Ismaili N/100 and Posts N/25. Bars fill based on the SubscriptionUsage counters.

11. /me returns vendorStatus + delegation

- GET /v1/subscriptions/me for a VENDOR.

Expected: Payload includes vendorStatus { tier, subscribed, trialActive, trialEndsAt, trialDays } and delegation (null for a VENDOR not staff of any org).

12. Non-VENDOR accounts unaffected

- Log in as PLAYER/COACH/ACADEMY/etc.; open Uandikishaji.

Expected: Each renders their own existing flow. Middleware early-returns on non-VENDOR creators/organizers. No regressions on media POST for non-metered types.

13. Deferred features return true from caps but have no consumer

- GET /v1/subscriptions/catalog → features.VENDOR.ENTERPRISE.canBroadcastToAll

Expected: true. But there is NO endpoint to actually broadcast — attempting to build a broadcast yourself finds nothing to hit. See project_vendor_broadcast_service memory. Same for sokasokoAccountSlot / flashSales / productListings caps.

How to report a bug

Field	Example
Test case #	5 — Home-feed post cap
Device / OS	Pixel 6a · Android 14
App version	1.0.1+14
Backend commit	41e8045
Account	VENDOR · TFH-V-A000012
Endpoint	POST /v1/medias
Expected	6th post 429 cap=5
Actual	6th post 201 accepted
Screenshot / repro	attached
Render log excerpt	attached

Known limitations (not bugs)

- Broadcast-to-all-accounts pipeline not built. Enterprise cap flag = true but no endpoint accepts a broadcast. See project_vendor_broadcast_service memory.
- SokaSoko house-account concept doesn't exist yet — Priority/Guaranteed slot flags have no consumer. See project_sokasoko_house_account memory.
- Product listings cap (5/25/100/unlimited) not enforced — no endpoint owns 'listings' yet. Cap will kick in when Advert/Product model is claimed for VENDOR.
- Flash sales cap not enforced — no flash-sale endpoint exists. Same story.
- Advanced analytics + export not exposed via any endpoint yet. Cap flag stored.
- Featured placement in home feed not honored by the sampler. See project_home_feed_paid_bias memory.
- Downgrade to a lower paid tier does not auto-cancel prior paid Subscription rows.
- Enterprise contact-us request currently reuses the standard PENDING sub flow with amount=0 — a dedicated 'contact requests' review dashboard would be cleaner (deferred).
